

Versatile, affordable security

Unified Threat Management

Powerful, all-in-one network security solutions.

Perimeter Firewall

Web Content Filtering

Email Security

VPN Gateway

Intrusion Detection (IDS)

Internal Firewall

Load Balancer

SmoothWall software products can either be used independently, or combined together to form a powerful, multi-functional network security appliance. This is the very principle of Unified Threat Management (UTM) and its advantages include enhanced performance, more convenience and reduced initial and ongoing costs.

Unified Threat Management (UTM)...

SmoothWall's UTM appliances contain the following main components;

- Perimeter Firewall
- Guardian Web Content Filtering
- SmoothZap Email Security
- VPN Gateway
- Intrusion Detection (IDS)
- Internal Firewall
- Load Balancer

SmoothTraffic (for increased control and management of bandwidth), can also be provided as an optional add-on module.

Hardware UTM Appliances

The SmoothGuard 1000-UTM is a powerful, all-in-one security appliance that combines SmoothWall's firewall, Guardian web filtering and VPN solutions with IDS, anti-virus, and market-leading anti-spam from Mailshell. With protection for up to 1000 PCs and powerful hardware, this appliance is an advanced and affordable network security solution.

The SmoothGuard benefits from best of breed hardware including an Intel® Core™ 2 Duo processor, coupled with seven individual Ethernet interfaces on the PCI Express® bus and a Gigabyte of RAM. It is preconfigured to run right out of the box and design-optimized to operate 24-7, 365 days a year.

Software UTM Appliances

SmoothWall can also supply "Software Appliances", as complete packages to convert a standard server or PC into a dedicated hardware security appliance, complete with a security-hardened Linux operating system.

This is a cost effective alternative to traditional appliances and the use of standard hardware can often offer increased performance and better value for money. With a software appliance you can also download the required software components immediately and be up and running in less than an hour.
